You are the CEO of the company  
Cody Co.

CEO

# You want to manage your company and employee details

I need a way to manage the details !

To do this first you need to get their details

This serves as the data.  
"Data" are related facts

Name: Andy  
Position: Tech Manager  
Age: 28

E-mail: popupdev04@gmail.com

Documents:

These data are systematically organized to form databases

## Manager Database

*Relational Database*

ID	Name	Team	Age	E-mail
1	Andy	Tech	28	popup...
...	.....	.....	...	.....
...	.....	.....	...	.....

## Employee Database

ID	Name	Team	Age	Photo
1	Jedy	Sales	22	
...	.....	.....	...	.....
...	.....	.....	...	.....

But how can we store, access, represent and manipulate the database ?

ID	Name	Team	Age	E-mail
1	Andy	Tech	28	popup...
...	.....	.....	...	.....
...	.....	.....	...	.....

ID	Name	Team	Age	Photo
1	Jedy	Sales	22	
...	.....	.....	...	.....
...	.....	.....	...	.....

That is where DBMS Came to the scene

Database Management Systems (DBMS) are software systems used to store, retrieve, and run queries on data.

A DBMS serves as an interface between an end-user and a database, allowing users to create, read, update, and delete data in the database.

# 4 Major Types of DBMS

## Hierarchical

data is organized into a tree-like structure

## Network

uses a network structure to create a relationship between entities

## Relational

data is relational & is stored in tabular form of columns & rows

ID	Name	Team	Age	Photo
1	Jedy	Sales	22	
...	....	....	...	.....
...	....	....	...	.....

## Object oriented

based on OOP. It is represented & stored in the form of objects

### Object-Oriented Model

#### Object 1: Maintenance Report

Date	
Activity Code	
Route No.	
Daily Production	
Equipment Hours	
Labor Hours	

#### Object 1 Instance

01-12-01
24
1-95
2.5
6.0
6.0

#### Object 2: Maintenance Activity

Activity Code	
Activity Name	
Production Unit	
Average Daily Production Rate
